

People Analytics & AI Project Portfolio

End-to-End HR Analytics | Workforce Intelligence | AI-Assisted Insights
Decision Support | Data Governance | Human Accountability

HumanEvoX analytics focus

HumanEvoX connects trusted people data, HR domain knowledge, analytics and governed AI to improve decisions across the full employee lifecycle. The work starts with business questions, KPI definitions and data quality, then moves into dashboards, diagnostic analysis, workflow automation and AI-assisted interpretation.

Portfolio scope

The portfolio spans workforce planning, recruitment, onboarding, HR operations, performance, talent and succession, learning and skills, reward, employee listening, absence and workforce availability, retention, representation/equity, and People Analytics data governance. Client profiles are anonymised/archetypal UAE and KSA examples unless explicitly identified as documented prior experience.

Analytics logic

Business Question -> Trusted People Data -> KPI Framework -> Descriptive / Diagnostic Analytics -> AI-Assisted Insight -> Workflow / Action -> Human Decision -> Outcome Measurement

Responsible analytics principle

AI supports classification, summarisation, pattern detection and decision preparation. It does not replace accountable HR or business decisions. Sensitive analyses require appropriate access, privacy thresholds, validation, explainability and human review.

01 Enterprise People Analytics Operating Model & Executive Workforce Dashboard

Client industry / country

UAE Local Conglomerate - diversified real estate, retail and services portfolio.

Client pain point / scope

HR data sits across multiple businesses and systems, with inconsistent KPI definitions and manual executive reporting. Leadership lacks one trusted view of workforce size, movement, cost, capability and risk.

Our methodology

Define business questions first, then create KPI definitions, data ownership and a workforce data dictionary. Reconcile HRIS, payroll and approved talent data using Power Query. Build Power BI measures for headcount, FTE, movement, span, tenure, workforce cost and organisational layers. Use an LLM only to draft commentary from validated aggregate measures. Automate refresh, exception alerts and monthly executive packs.

Technology leveraged / design stack

Excel; Power Query; Power BI / DAX; SAP SuccessFactors, Oracle HCM or Workday as source-system examples; Microsoft Copilot or approved LLM; Power Automate.

Results / performance measures

Executive workforce dashboard, KPI catalogue, data-quality log and reporting cadence. Track reporting effort, reconciliation exceptions, refresh timeliness, metric adoption and decision/action closure.

Differentiation for client

Creates a trusted analytics foundation across multiple HR domains before adding advanced AI, with transparent metric definitions and accountable data owners.

02 Strategic Workforce Planning & Skills Intelligence

Client industry / country

KSA Multinational - industrial and professional services workforce.

Client pain point / scope

Business growth and localisation priorities require clearer visibility of future workforce demand, critical skills, internal supply and external hiring pressure.

Our methodology

Segment workforce demand by business, role family, location and critical skill. Build baseline supply from approved HR data and validated skills evidence. Model scenarios for growth, attrition, productivity and hiring. Use AI to normalise skill terminology and draft scenario narratives; analysts validate assumptions. Combine internal mobility, hiring feasibility and learning options into workforce actions.

Technology leveraged / design stack

Power BI / DAX; Excel scenario models; Power Query; enterprise HRIS; Eightfold AI or Gloat as optional talent-intelligence layers; Microsoft Copilot / approved LLM.

Results / performance measures

Workforce scenarios, skill-gap heatmap, critical-role view and action plan. Track demand-supply gaps, vacancy exposure, internal fill, skill coverage, scenario variance and action completion.

Differentiation for client

Links workforce analytics to concrete build-buy-borrow-move decisions instead of producing headcount forecasts without talent actions.

03 Recruitment Funnel, Quality & Talent Intelligence Analytics

Client industry / country

UAE Government Entity - high-volume professional and specialist hiring.

Client pain point / scope

Application volume is visible, but leaders cannot clearly distinguish sourcing constraints, screening quality, interview delays, offer loss and hard-to-fill market conditions.

Our methodology

Standardise requisition, candidate, source, stage and date fields. Consolidate ATS exports and validate stage logic. Build funnel, ageing, source-yield and hiring-manager dashboards. Add talent-market data for scarcity and competitor mapping. Use AI to summarise validated patterns and draft targeted questions; automate weekly exception notifications for stalled requisitions and ageing candidates.

Technology leveraged / design stack

ATS such as Teamtailor / SuccessFactors Recruiting / Oracle Recruiting; Excel; Power Query; Power BI; LinkedIn Talent Insights or approved market data; Microsoft Copilot; Power Automate.

Results / performance measures

Recruitment analytics suite covering time to shortlist, stage conversion, source yield, offer acceptance, ageing, hiring-manager turnaround and market scarcity. Track data completeness and action closure alongside hiring KPIs.

Differentiation for client

Separates pipeline volume from quality, speed and external market constraints, giving TA and business leaders specific intervention points.

04 Onboarding, Mobility & Early-Tenure Analytics

Client industry / country

UAE Aviation & Logistics Group - large multi-role workforce.

Client pain point / scope

Day-one readiness, onboarding completion and early attrition are monitored through separate operational trackers, limiting visibility of where new-hire experience breaks down.

Our methodology

Create a joiner-level dataset linking onboarding milestones, access/equipment readiness, mandatory learning, manager check-ins and approved employee outcomes. Analyse delays by role, location and owner. Use cohort analysis for early-tenure movement and exits. AI drafts reviewed summaries of recurring bottlenecks; automation sends overdue-task alerts and refreshes readiness dashboards.

Technology leveraged / design stack

Oracle HCM / SuccessFactors Onboarding / Workday examples; Microsoft Lists or SharePoint; Power Query; Power BI; Power Automate; Microsoft Copilot.

Results / performance measures

Onboarding readiness dashboard, milestone ageing, 30/60/90-day cohort view and early-tenure risk indicators. Track day-one readiness, overdue dependencies, completion, early exits and manager/new-hire feedback.

Differentiation for client

Connects employee-experience measures to operational dependencies and ownership, allowing HR to address causes rather than only report onboarding satisfaction.

05 HR Operations, Employee Services & Case Analytics

Client industry / country

KSA Government-Linked Organisation - national-scale services environment.

Client pain point / scope

HR service demand is high, but case categories, repeat queries, SLA performance and root causes are not consistently analysed across employee services.

Our methodology

Create a service taxonomy and standard case fields. Analyse demand volume, channel, category, resolution time, reopen rate, escalation and repeat-contact patterns. Use text classification to group approved case descriptions and identify recurring themes; HR validates categories. Automate SLA alerts and management reporting. Link recurring demand to policy, process, knowledge or system improvement actions.

Technology leveraged / design stack

ServiceNow HRSD or Microsoft service workflows; Excel / Power Query; Power BI; Microsoft Copilot / approved LLM for controlled text classification and summaries; Power Automate.

Results / performance measures

Service dashboard, demand heatmap, root-cause backlog and SLA monitoring. Track first-contact resolution, ageing, reopen rate, escalation, repeat demand and improvement actions closed.

Differentiation for client

Turns HR operations data into process-improvement intelligence rather than using case reporting only as a service-volume scorecard.

06 Performance Management, Goal Quality & Calibration Analytics

Client industry / country

UAE Bank - regulated enterprise environment.

Client pain point / scope

Performance cycles generate ratings and completion statistics, but leaders need better visibility of objective quality, calibration patterns, distribution shifts and follow-through on development actions.

Our methodology

Standardise performance-cycle measures and separate completion from quality. Analyse objective completeness, rating patterns, calibration movement and manager/function variation using approved data. Use AI to classify goal themes or summarise authorised evidence, never to assign ratings. Build calibration views with privacy thresholds and automate cycle reminders and exception reporting.

Technology leveraged / design stack

Workday / SAP SuccessFactors PMGM / Oracle HCM examples; Power BI; Excel / Power Query; Microsoft Copilot or approved LLM; Power Automate.

Results / performance measures

Performance dashboard, calibration analysis, objective-quality checks and action tracker. Track completion, overdue reviews, calibration changes, distribution patterns, development-action closure and manager effort.

Differentiation for client

Uses analytics to improve process consistency and decision preparation while keeping performance ratings and employment decisions with accountable managers.

07 Talent Management, Succession & Internal Mobility Analytics

Client industry / country

UAE Local Technology Group - fast-growing multi-entity organisation.

Client pain point / scope

Talent reviews, succession plans and internal moves are managed in different tools, making it difficult to see critical-role coverage, bench strength and whether talent actions actually happen.

Our methodology

Define critical-role, successor-readiness and talent-pool measures. Reconcile approved talent, performance, mobility and vacancy data. Build succession coverage, readiness, diversity-of-pipeline and internal-movement views. Use network-style role adjacency and skills evidence to identify possible internal pools for human review. Automate overdue talent actions and review-pack preparation.

Technology leveraged / design stack

Darwinbox / Workday / SuccessFactors examples; Excel; Power Query; Power BI; Gloat or Eightfold AI as optional talent-marketplace layers; Microsoft Copilot; Power Automate.

Results / performance measures

Succession dashboard, critical-role exposure, internal mobility funnel and talent-action tracker. Track successor coverage, readiness mix, internal fill, talent-pool movement and action closure.

Differentiation for client

Connects annual talent-review labels to measurable succession and mobility outcomes, reducing the gap between talent discussions and workforce action.

08 Learning, Skills & Capability Analytics

Client industry / country

KSA Multinational - technology-enabled industrial group.

Client pain point / scope

Learning reporting focuses on enrolments and completion, while leadership needs evidence of skill coverage, capability priorities and whether learning supports role and business requirements.

Our methodology

Map learning activity to role families, skills and strategic capability priorities. Consolidate LMS, assessment and approved workforce data. Analyse participation, completion, assessment evidence, pathway progression and skill coverage. Use AI to classify learning content against a controlled skills taxonomy; L&D; validates mappings. Automate refreshes and alerts for critical pathway gaps.

Technology leveraged / design stack

SuccessFactors Learning / Oracle Learning / enterprise LMS; Excel; Power Query; Power BI; Microsoft Copilot / approved LLM; optional skills platforms such as Gloat or Eightfold AI.

Results / performance measures

Capability dashboard, skill-gap heatmap, pathway analytics and learning-demand view. Track coverage, completion, assessment evidence, pathway progression and priority-skill gaps.

Differentiation for client

Moves L&D; analytics beyond attendance by linking learning evidence to roles, skills and strategic workforce priorities.

09 Reward, Pay Equity & Workforce Cost Analytics

Client industry / country

UAE Financial Services Organisation - large professional workforce.

Client pain point / scope

Compensation decisions require stronger visibility of workforce cost, grade positioning, pay distribution and potential unexplained differences while protecting sensitive employee data.

Our methodology

Create controlled reward measures using approved compensation, grade, job, location and workforce data. Analyse compa-ratio, range penetration, workforce cost and distribution by relevant job architecture. Use statistical controls for like-for-like analysis where data quality permits; flag patterns for specialist review rather than infer discrimination. Apply privacy thresholds and restricted access. Automate recurring cost and exception reporting.

Technology leveraged / design stack

HRIS / payroll source data; Excel; Power Query; Power BI; Python or approved statistical environment for controlled analysis; Power Automate for secure reporting workflows.

Results / performance measures

Reward dashboard, workforce-cost view, pay-distribution analysis and investigation queue. Track data completeness, range positioning, cost movement and reviewed exceptions.

Differentiation for client

Combines decision-useful reward analytics with privacy, job-architecture context and specialist review instead of presenting raw pay gaps as conclusions.

10 Employee Listening, Experience & Organisational Health Analytics

Client industry / country

UAE Government Entity - large multi-location workforce.

Client pain point / scope

Survey results, HR service data and workforce outcomes are reviewed separately, making it difficult to identify recurring employee-experience themes and where action is required.

Our methodology

Create a listening framework linking survey dimensions, approved comments, HR service themes and workforce indicators at appropriate aggregate levels. Use NLP/LLM-assisted theme classification on de-identified text with human validation. Compare themes by relevant cohorts only where privacy thresholds are met. Track action plans and repeat measures over time.

Technology leveraged / design stack

Employee survey platform; Excel / Power Query; Power BI; approved enterprise LLM or Microsoft Copilot for de-identified text themes; Power Automate for action tracking.

Results / performance measures

Experience dashboard, theme analysis, action register and trend view. Track response coverage, theme movement, action completion, service indicators and selected workforce outcomes without claiming causal relationships.

Differentiation for client

Integrates qualitative and quantitative evidence while protecting anonymity and distinguishing correlation from causation.

11 Absence, Wellbeing & Workforce Availability Analytics

Client industry / country

KSA Large Conglomerate - multi-site corporate and operational workforce.

Client pain point / scope

Absence and workforce-availability data are fragmented across time, payroll and HR records, limiting understanding of operational patterns and policy/process issues.

Our methodology

Define absence and availability measures with HR, payroll and operations. Reconcile approved time and HR data, analyse frequency, duration, seasonality and organisational patterns, and apply minimum cohort thresholds. Use anomaly detection to flag unusual aggregate patterns for review; do not infer individual health conditions. Automate recurring dashboards and exception checks.

Technology leveraged / design stack

Timekeeping / payroll / HRIS data; Excel; Power Query; Power BI; Python for aggregate anomaly analysis where approved; Power Automate.

Results / performance measures

Absence dashboard, trend analysis, data-quality checks and organisational action view. Track absence frequency/duration, lost days, reporting completeness and operational follow-up.

Differentiation for client

Provides workforce-availability intelligence without turning aggregate absence analytics into medical inference or automated individual decisions.

12 Attrition, Retention & Organisational Movement Analytics

Client industry / country

UAE Multinational - regional headquarters and professional workforce.

Client pain point / scope

Leaders see turnover rates after exits occur but lack a consistent view of regretted loss, internal movement, tenure patterns and organisational hotspots.

Our methodology

Define voluntary, involuntary, regretted and internal-movement measures. Build cohort and survival-style views by role family, tenure and organisational segment where sample sizes permit. Combine validated exit reasons, mobility and workforce data. Use predictive modelling only as an exploratory, governed layer with explainability and bias testing; prioritise aggregate risk patterns over individual scoring. AI drafts reviewed management commentary.

Technology leveraged / design stack

Workday / SuccessFactors / Oracle HCM examples; Excel; Power Query; Power BI; Python for governed statistical modelling; Microsoft Copilot / approved LLM.

Results / performance measures

Retention dashboard, cohort analysis, movement flows and organisational hotspot view. Track voluntary/regretted attrition, tenure distribution, internal mobility, exit themes and action outcomes.

Differentiation for client

Shifts retention analytics from a single turnover percentage to workforce flows, cohorts and actionable organisational patterns with clear modelling safeguards.

13 DEI, Representation & Workforce Equity Analytics

Client industry / country

KSA Multinational - diversified corporate workforce.

Client pain point / scope

Leadership needs consistent representation and progression analytics across hiring, promotion, development and leadership pipelines while respecting local legal, cultural and data-governance requirements.

Our methodology

Agree legally and organisationally appropriate demographic dimensions before analysis. Standardise representation, hiring, promotion, development and leadership-pipeline measures. Apply minimum cohort thresholds and suppress small groups. Analyse process outcomes and progression patterns; use AI only for reviewed narrative summaries, not sensitive-attribute inference. Route material findings to HR/legal governance.

Technology leveraged / design stack

Enterprise HRIS; ATS; LMS/talent data; Excel; Power Query; Power BI; Microsoft Copilot / approved LLM for aggregate summaries; Power Automate.

Results / performance measures

Representation and progression dashboard, pipeline analysis and governance controls. Track representation, hiring/promotion flows, development access and leadership-pipeline movement where permitted.

Differentiation for client

Provides evidence for workforce-equity discussions without inferring protected characteristics or using analytics to make automated employment decisions.

14 People Analytics Data Quality, Governance & AI Insight Layer

Client industry / country

UAE Large Conglomerate - enterprise-wide People Analytics function.

Client pain point / scope

Dashboards and AI-generated insights are unreliable when employee identifiers, organisational structures, dates and KPI logic differ across systems and business units.

Our methodology

Establish canonical workforce fields, metric definitions, lineage and owners. Profile completeness, duplicates, invalid dates and hierarchy exceptions. Create automated data-quality rules before dashboard refresh. Build a governed AI insight layer that can summarise only validated aggregate measures and must cite the underlying KPI/value. Maintain prompt versions, correction logs and human approval for executive commentary.

Technology leveraged / design stack

HRIS/HCM and payroll sources; Excel; Power Query; SQL; Power BI; Microsoft Fabric or equivalent data platform where available; approved LLM / Microsoft Copilot; Power Automate.

Results / performance measures

Data dictionary, quality dashboard, lineage map, certified KPI layer and AI-summary controls. Track completeness, duplicate rate, hierarchy exceptions, refresh failures, AI corrections and certified-metric adoption.

Differentiation for client

Makes trusted people data the prerequisite for AI-assisted decision intelligence, reducing the risk of producing polished narratives from inconsistent HR data.
