

Talent Intelligence & Workforce Intelligence

Market Mapping | Skills Scarcity | Competitor Intelligence
Talent Supply | Talent Flows | Hiring Feasibility | AI-Assisted Research

HumanEvoX intelligence focus

HumanEvoX combines recruitment judgement, labour-market research, People Analytics and AI-assisted research to convert external talent data into decision intelligence for hiring, workforce planning and capability strategy. The objective is not to produce long candidate lists, but to answer whether talent exists, where it sits, how scarce it is and what realistic alternatives are available.

Portfolio scope

Twelve UAE and KSA case designs span executive market mapping, skills scarcity, AI/technology talent landscapes, Saudi talent intelligence, competitor organisation structures, talent-hub feasibility, talent flows, compensation/hiring feasibility, emerging HR/AI roles, search validation, Strategic Workforce Planning intelligence and an enterprise Talent Intelligence operating model.

Intelligence methodology

Business / Hiring Question -> Role & Skills Definition -> Market Universe -> Evidence Collection -> AI-Assisted Classification -> Human Validation -> Talent / Competitor Analysis -> Feasibility & Alternatives -> Decision Intelligence -> Market Feedback / Refresh

Responsible AI & evidence boundary

AI accelerates classification, taxonomy normalisation, evidence structuring and summarisation. Human researchers validate evidence and conclusions. Public or licensed market evidence is distinguished from inference; confidence and uncertainty are made visible. No automated employment decisions are made.

01 Executive Talent Market Mapping & Competitor Intelligence

Client industry / country

UAE Government-Linked Organisation - strategic leadership hiring.

Client pain point / scope

Leadership needs evidence on where relevant executive talent sits, competitor structures and realistic target pools before launching a confidential search.

Our methodology

Translate the leadership brief into target capabilities, adjacent backgrounds and exclusion criteria. Build a market universe by sector, geography and competitor. Use AI to classify public professional evidence and draft comparable profile summaries for researcher validation. Map organisations, functions, reporting lines and talent clusters. Human researchers verify evidence before presenting market conclusions.

Technology leveraged / design environment

LinkedIn / approved professional data sources; Excel / Power Query; Power BI; approved LLM / Microsoft Copilot; research databases where licensed.

Results / performance measures

Market map, target-company universe, executive talent landscape and search-feasibility brief. Track addressable pool size, evidence completeness, target diversity, response signals and market coverage.

Differentiation for client

Applies hiring judgement to market data so the output explains talent feasibility and adjacent pools, not merely a list of names.

02 Critical Skills Scarcity & Talent Supply Intelligence

Client industry / country

KSA Government Entity - digital transformation and emerging capability agenda.

Client pain point / scope

Workforce plans identify future capability demand, but leaders lack evidence on external availability, skill concentration and realistic hiring difficulty.

Our methodology

Define critical skills and role families with HR/business SMEs. Build external supply indicators by geography, sector and employer. Use AI to normalise skill terminology and classify approved public role evidence for analyst validation. Compare internal demand with external supply, seniority, localisation and hiring lead-time signals. Develop scarcity tiers and alternative talent-pool hypotheses.

Technology leveraged / design environment

Power BI; Excel / Power Query; approved LLM; professional-market research sources; optional SQL/Python for larger datasets.

Results / performance measures

Skill-scarcity heatmap, supply-demand intelligence and alternative-pool recommendations. Track talent concentration, estimated addressable supply, hiring lead-time signals and dependency on scarce employers.

Differentiation for client

Tests workforce demand against real market supply so planning assumptions reflect talent availability rather than internal demand alone.

03 AI & Technology Talent Landscape Intelligence

Client industry / country

UAE Technology / AI Group - AI, data, cloud, cyber and product hiring.

Client pain point / scope

Rapidly evolving job titles and overlapping skills make it difficult to understand where specialist AI and technology talent is concentrated across UAE, GCC and selected global markets.

Our methodology

Create a capability-led taxonomy rather than relying on titles. Map employers, talent clusters, seniority, adjacent disciplines and relevant industry backgrounds. Use AI to classify approved profile/job evidence and normalise terminology, with researcher QA. Analyse concentration, mobility signals and adjacent pools. Produce role-specific sourcing hypotheses and market constraints.

Technology leveraged / design environment

LinkedIn / professional data; approved LLM; Excel / Power Query; Power BI; optional Python for taxonomy/data preparation; licensed talent platforms where available.

Results / performance measures

Technology talent landscape, skill-cluster maps and sourcing strategy. Track pool size, employer concentration, adjacent-skill availability, geography and response/conversion evidence where outreach is tested.

Differentiation for client

Combines AI-assisted classification with recruiter judgement to distinguish true capability from inconsistent technology job titles.

04 KSA National Talent & Localisation Intelligence

Client industry / country

KSA Large Conglomerate - strategic Saudi talent pipelines.

Client pain point / scope

Business units need stronger evidence on Saudi talent availability for priority functions and levels before setting hiring and development expectations.

Our methodology

Define priority roles, capabilities and experience thresholds. Map Saudi talent pools across target employers, sectors and locations using approved professional evidence. Analyse seniority, career pathways, adjacent sectors and likely development gaps. Use AI to structure public evidence and identify patterns for analyst validation. Connect external intelligence with internal pipeline planning without making individual eligibility decisions.

Technology leveraged / design environment

Professional-market research sources; Excel / Power Query; Power BI; approved LLM / Copilot; internal aggregate workforce planning inputs.

Results / performance measures

Saudi talent landscape, target-employer map and pipeline intelligence. Track addressable pool, experience distribution, employer concentration, location and development/hiring options.

Differentiation for client

Supports localisation with evidence about market depth and development pathways rather than relying on headline availability assumptions.

05 Competitor Organisation & Talent Structure Intelligence

Client industry / country

UAE Bank / Financial Services - transformation, analytics and digital functions.

Client pain point / scope

Leaders want to understand how peer organisations structure emerging functions and where comparable leadership and specialist talent sits.

Our methodology

Define the business questions and peer set. Research publicly evidenced organisation structures, leadership layers, role families and capability patterns. Use AI to extract and organise approved public information for human verification. Compare structural patterns without assuming private organisational facts. Map talent movement between peers and identify alternative benchmark organisations.

Technology leveraged / design environment

Public company/professional sources; approved LLM; Excel / Power Query; Power BI; research databases where licensed.

Results / performance measures

Competitor structure map, role-family benchmark and talent-flow view. Track peer coverage, evidence confidence, recurring structure patterns and talent movement signals.

Differentiation for client

Combines organisation intelligence and talent intelligence while clearly separating verified public evidence from analyst inference.

06 Location Strategy & Talent Hub Feasibility

Client industry / country

UAE Multinational - regional capability hub planning.

Client pain point / scope

The organisation is considering where to build a new specialist capability, but cost comparisons alone do not show whether sufficient talent can be hired and retained.

Our methodology

Define required roles, skills, seniority, language/time-zone and scale. Compare candidate locations using external talent supply, employer concentration, competition, hiring feasibility and available compensation benchmarks. Use AI to standardise market evidence and summarise location trade-offs for analyst review. Build weighted scenarios with transparent assumptions rather than a black-box location score.

Technology leveraged / design environment

Power BI; Excel scenario modelling; Power Query; approved LLM; external talent-market and compensation sources where licensed.

Results / performance measures

Location feasibility matrix, talent-hub scenarios and risk brief. Track addressable supply, competitor density, salary range evidence, hiring lead time and concentration risk.

Differentiation for client

Makes talent availability a core location-strategy variable rather than treating workforce supply as an afterthought.

07 Talent Flow, Mobility & Competitor Movement Intelligence

Client industry / country

UAE Aviation & Logistics Group - critical professional functions.

Client pain point / scope

Recruitment and workforce teams need to understand which employers gain or lose relevant talent and which adjacent sectors produce transferable capability.

Our methodology

Define target role families and comparable employers. Analyse public career-movement evidence at aggregate level, validating role relevance before inclusion. Use AI to classify movement patterns and adjacent backgrounds for researcher review. Identify feeder employers, destination employers, cross-sector pathways and geography patterns. Test hypotheses through targeted outreach where appropriate.

Technology leveraged / design environment

Professional-market data; Excel / Power Query; Power BI; approved LLM; optional Python for aggregate movement analysis.

Results / performance measures

Talent-flow map, feeder-employer intelligence and adjacent-sector pathways. Track movement direction, employer concentration, cross-sector mobility and outreach response evidence.

Differentiation for client

Adds dynamic talent movement to static market mapping, helping sourcing and workforce teams understand where talent actually moves.

08 Compensation & Hiring Feasibility Intelligence

Client industry / country

KSA Multinational - scarce specialist and leadership roles.

Client pain point / scope

Hiring managers set requirements and compensation expectations before understanding whether the combination is realistic in the target market.

Our methodology

Clarify role scope, must-have capabilities and acceptable adjacencies. Triangulate available salary evidence, market supply, employer competition and search/outreach signals. Use AI to structure source evidence and identify conflicting data for analyst review. Build feasible scenarios by level, location, talent pool and compensation range. Clearly label evidence quality and uncertainty.

Technology leveraged / design environment

Licensed compensation sources where available; professional-market research; Excel; Power BI; approved LLM / Copilot.

Results / performance measures

Hiring-feasibility brief, compensation evidence range and scenario options. Track pool depth, compensation evidence, target-company coverage, outreach response and requirement constraints.

Differentiation for client

Connects compensation, talent supply and search evidence instead of presenting salary benchmarks without hiring context.

09 Emerging Role & Skills Intelligence for HR / AI Transformation

Client industry / country

UAE Large Conglomerate - HR digital and AI transformation.

Client pain point / scope

HR leadership needs to understand emerging roles, skills and operating-model patterns across People Analytics, HR AI, People Systems and automation.

Our methodology

Define emerging capability domains and research current market role evidence across selected peer organisations. Use AI to cluster job descriptions and public professional evidence into validated skill themes. Compare role mandates, seniority, technology exposure and organisation placement. Identify common capabilities, adjacent talent sources and potential internal development pathways.

Technology leveraged / design environment

Public job/professional sources; approved LLM; Excel / Power Query; Power BI; optional Python for text clustering with human validation.

Results / performance measures

Emerging-role taxonomy, skills map and benchmark report. Track role prevalence, recurring skills, reporting-line patterns, technology exposure and adjacent talent pools.

Differentiation for client

Uses live market evidence to inform HR capability design while avoiding generic future-of-work role lists.

10 Executive Search Market Validation & Outreach Test

Client industry / country

UAE Government / Semi-Government - confidential senior search.

Client pain point / scope

A leadership brief appears highly restrictive, creating risk that a full search begins before the organisation understands whether the target profile exists and will engage.

Our methodology

Convert the brief into mandatory, preferred and flexible criteria. Map the initial addressable market and adjacent pools. Run a controlled outreach test to a small validated sample using consistent messaging. Capture response, interest, compensation/location objections and profile gaps. Use AI to summarise anonymised themes for researcher validation. Recalibrate the search brief with evidence before scaling.

Technology leveraged / design environment

Professional sourcing platforms; CRM/ATS where existing; Excel; Power BI; approved LLM for theme summarisation; email/outreach tools permitted by the client.

Results / performance measures

Brief-validation report, initial market map and outreach evidence. Track reachable pool, response, interest, recurring objections and criteria causing market compression.

Differentiation for client

Treats outreach as a market-research instrument, allowing the client to adjust unrealistic assumptions before investing in a full search.

11 Talent Intelligence for Strategic Workforce Planning

Client industry / country

KSA Industrial / Infrastructure Group - multi-year capability transformation.

Client pain point / scope

Strategic workforce planning identifies future gaps but lacks external evidence on whether critical capabilities should be built internally, hired, borrowed or sourced through partners.

Our methodology

Take prioritised workforce gaps from SWP and assess external supply, scarcity, employer concentration, adjacent pools and hiring lead-time evidence. Use AI to classify market evidence and draft scenario summaries for analyst review. Compare Build, Buy, Borrow and partner options using time-to-capability, market depth and risk. Feed validated intelligence back into workforce scenarios.

Technology leveraged / design environment

Power BI; Excel / Power Query; approved LLM; external talent intelligence; internal aggregate workforce-planning outputs.

Results / performance measures

External supply heatmap and talent-action recommendations. Track scarcity, external dependency, time-to-capability, adjacent-pool availability and talent-market risk.

Differentiation for client

Creates the bridge between internal workforce planning and external labour-market reality.

12 Enterprise Talent Intelligence Operating Model & AI Research Copilot

Client industry / country

UAE/KSA Regional Conglomerate - decentralised recruitment and workforce teams.

Client pain point / scope

Talent research is conducted inconsistently across business units, with duplicated effort, varying evidence standards and limited reuse of market intelligence.

Our methodology

Define a common intake, research taxonomy, evidence standards, source rules, confidence labels and reusable deliverables. Build a central intelligence repository and request workflow. Design an AI research copilot to structure approved evidence, normalise terminology, draft summaries and flag missing evidence; researchers validate all outputs. Establish refresh cycles and business impact measures.

Technology leveraged / design environment

SharePoint / approved knowledge repository; Microsoft Copilot / approved enterprise LLM; Power Automate; Excel / Power Query; Power BI; licensed professional data sources.

Results / performance measures

Talent Intelligence operating model, research templates, knowledge taxonomy and portfolio dashboard. Track reuse, turnaround, evidence quality, stakeholder adoption and intelligence-to-decision actions.

Differentiation for client

Turns ad-hoc sourcing research into an enterprise decision-intelligence capability with AI accelerating analysis but human researchers owning evidence and conclusions.
