

HR Technology, Digital Employee Experience & Automation

People Systems | Digital HR Journeys | AI & Automation
Business Requirements | UAT | Adoption | Analytics

HumanEvoX positioning

HumanEvoX leads the HR/business side of technology-enabled transformation: process and journey redesign, business and functional requirements, data ownership and rules, AI and automation use cases, analytics, governance, business UAT and adoption. Technical implementation, configuration, integrations, migration and deployment remain with authorised platform, IT and implementation teams.

Portfolio scope

Twelve UAE and KSA case designs span employee self-service, HR knowledge, recruitment technology, onboarding, learning technology, performance and talent, employee services, People Systems landscape design, process re-engineering, UAT, digital adoption and manager self-service.

Design logic

HR / Employee Problem -> Current Journey & Systems -> Process Redesign -> Business Requirements -> AI / Automation -> Controls & UAT -> Adoption -> Analytics -> Human Decision

Explicit boundary

No HRIS/HCM implementation claim: named platforms illustrate enterprise environments. These cases do not claim technical platform configuration, data migration, systems integration or deployment work.

01 Digital Employee Experience & HR Self-Service Redesign

Client industry / country

UAE Local Conglomerate - diversified real estate, retail and services.

Client pain point / scope

Employees navigate multiple channels for policies, requests and HR support, creating repeated queries, unclear ownership and fragmented self-service.

Our methodology

Map high-volume employee journeys and service demand; identify friction and duplicate steps. Redesign self-service around employee intent. Define approved knowledge, service taxonomy and escalation rules. Use AI to retrieve/draft responses from governed content; automate routing, reminders and status updates. Validate through business UAT and adoption analytics.

Technology leveraged / design environment

Microsoft 365 / SharePoint; existing ServiceNow HRSD or equivalent; Microsoft Copilot / approved LLM; Power Automate; Power BI.

Results / performance measures

Journey maps, self-service blueprint, knowledge governance and experience dashboard. Measure self-service completion, repeat queries, resolution time, escalation and adoption.

Differentiation for client

Technology is organised around employee journeys and service outcomes, without platform implementation/configuration claims.

02 HR Knowledge Assistant & Governed Policy Experience

Client industry / country

KSA Multinational - regional professional and corporate workforce.

Client pain point / scope

HR repeatedly answers policy questions while employees struggle to locate current, authoritative information.

Our methodology

Rationalise approved HR knowledge; assign owners/review dates. Define question categories, confidence thresholds and escalation. Design retrieval-based AI responses from approved content with source references. Test ambiguous and sensitive questions; route exceptions to HR. Analyse unanswered questions to improve knowledge/processes.

Technology leveraged / design environment

Microsoft Copilot Studio / approved enterprise LLM as design options; SharePoint; Power Automate; Power BI; existing employee portal.

Results / performance measures

Knowledge model, AI-assistant design, test pack, escalation logic and usage dashboard. Track coverage, correction, escalation, content freshness and adoption.

Differentiation for client

Conversational AI is combined with knowledge governance and human escalation rather than an unrestricted chatbot.

03 Recruitment Technology & Workflow Automation Optimisation

Client industry / country

UAE Government Entity - high-volume professional and specialist recruitment.

Client pain point / scope

An existing ATS still depends on manual follow-ups, spreadsheet trackers and inconsistent recruiter-manager-candidate handoffs.

Our methodology

Map requisition-to-offer around the existing ATS. Identify manual touches, waiting time and exceptions. Redesign approvals, interview coordination, communications and feedback reminders. Define AI-assisted sourcing, structured screening and recruiter summaries with human review. Automate low-risk notifications and action tracking; measure through funnel analytics.

Technology leveraged / design environment

Existing ATS such as Teamtailor / SuccessFactors Recruiting / Oracle Recruiting; Microsoft Copilot; Power Automate; Power BI; Teams/Forms.

Results / performance measures

Target workflow, automation backlog, AI controls and funnel dashboard. Track time-to-shortlist, stage ageing, manager turnaround, candidate SLA and manual touches.

Differentiation for client

Optimises recruitment technology without claiming ATS deployment, configuration or implementation.

04 AI-Enabled Onboarding & Digital Joiner Experience

Client industry / country

UAE Aviation & Logistics Group - large multi-role workforce.

Client pain point / scope

Onboarding crosses HR, managers, IT and operations, creating inconsistent communication and limited day-one readiness visibility.

Our methodology

Map preboarding through first 90 days and dependencies. Define role-based tasks and ownership. Use AI to tailor approved communications and manager guidance. Automate reminders/status escalation around existing systems. Build readiness and experience analytics; run business UAT with representative personas.

Technology leveraged / design environment

Existing HCM/onboarding platform; Microsoft Copilot; Power Automate; SharePoint / Lists; Teams; Power BI; Forms.

Results / performance measures

Digital onboarding blueprint, task matrix, communication library, UAT scenarios and dashboard. Track readiness, overdue dependencies, completion and experience.

Differentiation for client

Treats onboarding as a cross-functional digital journey while technical configuration/integrations remain with platform teams.

05 Learning Technology, Skills & Digital Learning Experience

Client industry / country

KSA Large Conglomerate - multi-business corporate and operational workforce.

Client pain point / scope

Learning content, role requirements and development pathways are hard to navigate; LMS reporting is dominated by enrolment/completion.

Our methodology

Map learner/manager journeys around the existing LMS. Define role/skill taxonomy and pathways. Use AI to classify approved learning assets, support search and draft pathway recommendations for review. Redesign nomination, approval and reminder workflows. Link learning analytics to skills priorities; define requirements/UAT for technical teams.

Technology leveraged / design environment

Existing enterprise LMS / SuccessFactors Learning / Oracle Learning examples; Microsoft Copilot / approved LLM; Power Automate; Power BI; optional Gloat/Eightfold.

Results / performance measures

Learning-experience blueprint, skills-content mapping, workflow requirements and dashboard. Track search success, pathway adoption, completion, assessment evidence and skill coverage.

Differentiation for client

Focuses on HR/L&D; requirements, experience, analytics and adoption rather than LMS implementation.

06 Digital Performance & Talent Management Experience

Client industry / country

UAE Bank - enterprise performance, talent and succession environment.

Client pain point / scope

System-enabled performance/talent processes remain administratively heavy, with manual calibration preparation and weak action follow-through.

Our methodology

Map manager/employee journeys across goals, reviews, calibration and talent discussions. Simplify steps and clarify decision rights. Use AI for objective wording, authorised evidence summaries and calibration questions - never ratings. Automate reminders/action tracking around existing platforms. Design completion, calibration and talent-action dashboards.

Technology leveraged / design environment

Existing Workday / SuccessFactors / Oracle HCM talent modules; Microsoft Copilot / approved LLM; Power Automate; Power BI.

Results / performance measures

Target journey, AI guardrails, workflow requirements, UAT pack and dashboard. Track completion, overdue actions, manager effort, calibration movement and action closure.

Differentiation for client

Technology improves decision preparation while ratings, promotion and succession decisions remain human-owned.

07 HR Service Delivery, Case Management & Workflow Redesign

Client industry / country

UAE Financial Services Organisation - regulated professional workforce.

Client pain point / scope

Employee cases arrive through multiple channels, creating inconsistent categorisation, limited SLA visibility and manual follow-up.

Our methodology

Define service catalogue, taxonomy, ownership and escalation. Redesign intake/routing around the existing service platform. Use AI to classify approved case text and draft agent summaries; sensitive cases remain human-led. Automate SLA reminders/status notifications. Analyse recurring demand to improve policy/process design.

Technology leveraged / design environment

Existing ServiceNow HRSD or equivalent; Microsoft Copilot / approved LLM; Power Automate; Power BI; SharePoint knowledge layer.

Results / performance measures

Service operating model, workflow requirements, AI controls and dashboard. Track first-contact resolution, ageing, reopen rate, escalation and SLA.

Differentiation for client

Combines service redesign, analytics and governed AI without ServiceNow implementation/configuration claims.

08 People Systems Landscape, Process & Data Ownership Blueprint

Client industry / country

UAE Local Technology Group - fast-growing multi-entity organisation.

Client pain point / scope

Multiple HR tools create unclear process ownership, duplicated data and manual handoffs across HRIS, ATS, LMS, talent, assessment and analytics.

Our methodology

Map the existing People Systems landscape from the HR/business perspective: purpose, process owner, authoritative data, users, handoffs and pain points. Define target process ownership and business requirements. Identify workflow simplification, automation and AI opportunities. Document data rules and UAT scenarios for technical teams; prioritise by value, effort, risk and dependency.

Technology leveraged / design environment

Existing HCM/HRIS, ATS, LMS and talent platforms; Miro / Visio; Excel / Power Query; Power BI; Microsoft Copilot; Power Automate.

Results / performance measures

People Systems blueprint, ownership matrix, requirements backlog, data-rule catalogue and roadmap. Track duplicate handling, manual reconciliation, exceptions and adoption.

Differentiation for client

Provides HR-side architecture/requirements leadership while separating business transformation from technical implementation.

09 HR Process Re-engineering & Intelligent Workflow Portfolio**Client industry / country**

KSA Government-Linked Organisation - national-scale services environment.

Client pain point / scope

Core HR processes contain multiple approvals, duplicated data entry and offline trackers, increasing cycle time and administration.

Our methodology

Prioritise processes by volume, effort, risk and employee impact. Map current state, remove non-value-added steps and redesign decision rights. Apply automation before AI where rules are deterministic; use AI for suitable summarisation/classification/drafting. Define exceptions, human approvals and controls. Pilot workflows and compare baseline vs post-pilot measures.

Technology leveraged / design environment

Power Automate; Microsoft Copilot / approved LLM; Forms / Lists / Teams; Power BI; existing HCM/service platforms as systems of record.

Results / performance measures

Process maps, automation backlog, control matrix, pilot plan and benefits dashboard. Measure cycle time, manual touches, rework, exceptions, effort and adoption.

Differentiation for client

Starts with process redesign rather than automating inefficient workflows.

10 HR Technology UAT, Business Testing & Release Readiness**Client industry / country**

UAE Government Entity - enterprise HR technology change programme.

Client pain point / scope

Technology changes reach users without sufficiently structured business testing, creating late defects and inconsistent acceptance criteria.

Our methodology

Translate HR requirements into business scenarios, personas, acceptance criteria and end-to-end test cases. Prioritise critical journeys/exceptions. Coordinate HR SME testing, defect triage and business sign-off with technical teams. Use AI to draft test variants from approved requirements for review. Define release-readiness criteria covering process, data, controls, communications and training.

Technology leveraged / design environment

Existing HR platforms; Excel / Microsoft Lists; Teams; Microsoft Copilot / approved LLM; Power BI.

Results / performance measures

UAT framework, scenario library, defect log, sign-off criteria and readiness dashboard. Track test coverage, defect severity, closure, retest success and readiness.

Differentiation for client

Demonstrates HR functional ownership of testing/acceptance without implying technical configuration or deployment.

11 HR Technology Adoption & Digital Change Programme

Client industry / country

KSA Multinational - regional HR transformation programme.

Client pain point / scope

Digital HR capabilities exist but adoption differs by employee/manager population, limiting value and driving workarounds.

Our methodology

Segment users by persona, process and digital behaviour. Baseline adoption/friction. Design role-specific communications, manager enablement, learning and support. Use AI to tailor approved guidance and summarise feedback. Automate nudges for incomplete actions. Combine usage, process and experience measures to identify workflow/support changes.

Technology leveraged / design environment

Existing HR platforms; Teams / SharePoint; Microsoft Copilot; Power Automate; Power BI; survey tools.

Results / performance measures

Adoption strategy, persona plan, enablement assets and dashboard. Track active use, task completion, workaround volume, support demand and realised benefits.

Differentiation for client

Treats adoption as measurable business performance rather than one-off communications/training.

12 AI-Enabled Manager Self-Service & Decision Support

Client industry / country

UAE Multinational - regional headquarters and professional workforce.

Client pain point / scope

Managers depend heavily on HR for routine process guidance, workforce information and next-step decisions.

Our methodology

Identify high-frequency manager questions/decisions across hiring, onboarding, performance, talent, learning and workforce planning. Define approved sources and decision boundaries. Design an assistant that retrieves guidance and summarises validated workforce metrics without making employment decisions. Automate reminders/action tracking; apply access controls, privacy thresholds and HR escalation.

Technology leveraged / design environment

Microsoft Copilot / approved enterprise LLM; SharePoint; Power BI; Power Automate; existing HR portal and People Systems.

Results / performance measures

Manager-service catalogue, assistant design, governance rules and dashboard. Track HR query deflection, response time, adoption, correction/escalation and action completion.

Differentiation for client

Extends digital employee experience to managers while keeping sensitive employment decisions with accountable leaders.
