

AI Agents, Chatbots & HR Automation Portfolio

Agentic AI | HR Copilots | Employee & Manager Assistants
Workflow Automation | Governance | Human-in-the-Loop

HumanEvoX agentic HR focus

HumanEvoX designs governed AI-assisted HR workflows across the employee lifecycle. The emphasis is on the HR/business problem, approved data and knowledge, agent tasks, automation logic, human checkpoints, measurable outcomes and responsible use - not autonomous employment decisions.

Portfolio scope

Twelve UAE and KSA case designs cover recruitment, employee services, onboarding, HR case management, learning and skills, performance, talent and succession, workforce insights, employee listening, reward-policy support, HR transformation PMO and enterprise HR AI governance.

Agent design logic

HR Problem -> Approved Inputs / Knowledge -> Agent Task -> Workflow / Automation -> Human Checkpoint -> Action -> Analytics -> Continuous QA

Explicit boundaries

No HRIS/HCM implementation, configuration, data migration or systems-integration claims. Agents support classification, retrieval, drafting, summarisation, coordination and decision preparation. Accountable people retain hiring, performance, reward, succession, employee-relations and other consequential employment decisions.

01 AI Recruitment Copilot & Shortlist Intelligence Agent

Client industry / country

UAE Government Entity - professional and specialist hiring.

Client pain point / scope

Recruiters spend substantial time translating briefs into searches, comparing CV evidence, preparing interview probes and producing consistent shortlist packs.

Our methodology

Define mandatory criteria and evidence standards. Design an agent workflow that converts approved briefs into search logic, extracts CV evidence, flags missing information, drafts comparison summaries and prepares interview probes. Recruiters verify evidence and approve progression. Automate approved task routing and pack assembly while retaining decision logs.

Technology leveraged / design environment

Approved enterprise LLM / Microsoft Copilot; Excel scorecards; Power Automate; Power BI; existing ATS as system of record.

Results / performance measures

Agent design, prompt/control library, shortlist template and QA dashboard. Track recruiter minutes per candidate, corrections, evidence completeness, shortlist acceptance and turnaround.

Differentiation for client

Agent augments recruiter judgement; it does not autonomously reject, rank or hire candidates.

02 HR Policy & Employee Services Chatbot

Client industry / country

KSA Multinational - regional corporate workforce.

Client pain point / scope

Employees repeatedly ask HR routine policy and process questions, while answers vary by channel and outdated documents remain discoverable.

Our methodology

Create a governed knowledge base with owners, effective dates and approved sources. Design retrieval-based chatbot responses that cite source content. Define confidence thresholds, restricted topics and escalation. Test ambiguous and sensitive queries. Automate case creation for unresolved requests and analyse unanswered themes to improve knowledge.

Technology leveraged / design environment

Microsoft Copilot Studio / approved enterprise LLM; SharePoint; Power Automate; Power BI; existing employee portal.

Results / performance measures

Chatbot blueprint, knowledge governance, test cases, escalation workflow and usage analytics. Track answer coverage, correction rate, escalation, repeat questions and satisfaction.

Differentiation for client

Grounded responses, source visibility and human escalation reduce hallucination risk and protect HR accountability.

03 AI Onboarding Journey Coordinator Agent

Client industry / country

UAE Aviation & Logistics Group - high-volume multi-role workforce.

Client pain point / scope

Joiner tasks span HR, managers, IT and operations, creating missed dependencies, inconsistent communication and poor visibility before day one.

Our methodology

Define onboarding events, owners, dependencies and exceptions. Design an agent to monitor approved task status, generate role-specific reminders, answer governed onboarding questions and surface blockers. Automate nudges and escalation for overdue dependencies. Human owners resolve exceptions and employment decisions. Analyse readiness and recurring bottlenecks.

Technology leveraged / design environment

Microsoft Copilot / approved LLM; Power Automate; SharePoint / Lists; Teams; Power BI; existing onboarding/HCM platform as system of record.

Results / performance measures

Agent workflow, role-based task logic, exception rules and readiness dashboard. Track day-one readiness, overdue tasks, query volume, completion time and user experience.

Differentiation for client

Coordinates the journey across teams without claiming HCM implementation or replacing accountable process owners.

04 AI HR Case Triage & Service Desk Copilot

Client industry / country

UAE Bank - regulated employee-service environment.

Client pain point / scope

HR cases arrive through multiple channels and require manual categorisation, summarisation and routing, delaying response and obscuring recurring demand.

Our methodology

Define service taxonomy, sensitivity tiers, SLAs and escalation rules. Use AI to classify approved case text, draft case summaries and suggest routing; sensitive categories require human review. Automate SLA reminders and status communications. Analyse repeat themes and reopen patterns to identify policy/process improvements.

Technology leveraged / design environment

Existing ServiceNow HRSD or equivalent; Microsoft Copilot / approved LLM; Power Automate; Power BI; governed knowledge repository.

Results / performance measures

Triage design, routing rules, agent-assist prompts and service dashboard. Track classification agreement, first response, ageing, reopen rate, escalation and corrections.

Differentiation for client

AI assists service agents but does not autonomously decide sensitive employee matters.

05 AI Learning & Skills Pathway Assistant

Client industry / country

KSA Large Conglomerate - corporate and operational workforce.

Client pain point / scope

Employees struggle to navigate large learning catalogues and connect available development to role requirements and priority skills.

Our methodology

Create a controlled role/skill taxonomy and map approved learning assets. Design an assistant that retrieves relevant content and drafts learning pathways based on role, validated skill needs and available assets. Managers/employees confirm priorities. Automate pathway reminders and aggregate learning-gap reporting. Analyse coverage and assessment evidence.

Technology leveraged / design environment

Existing LMS; Microsoft Copilot / approved LLM; Power Automate; Power BI; optional Gloat/Eightfold skills layer where available.

Results / performance measures

Assistant design, skills-content map, pathway templates and analytics. Track search success, pathway uptake, completion, assessment evidence and priority-skill coverage.

Differentiation for client

AI improves discovery and pathway preparation while development decisions remain with employees, managers and L&D.;

06 AI Performance & Manager Coaching Copilot

Client industry / country

UAE Multinational - professional workforce.

Client pain point / scope

Managers need support drafting objectives, preparing quality feedback and navigating performance-cycle requirements without outsourcing managerial judgement to AI.

Our methodology

Define permitted assistance and prohibited decisions. Use AI to improve objective clarity, suggest evidence-based feedback structure and summarise authorised notes. Provide coaching prompts and policy guidance. Automate cycle reminders and incomplete-action alerts. Never generate final ratings or disciplinary decisions; managers review all outputs.

Technology leveraged / design environment

Microsoft Copilot / approved enterprise LLM; existing performance platform; Power Automate; Power BI; SharePoint policy content.

Results / performance measures

Manager-copilot design, guardrails, prompt library and adoption dashboard. Track usage, corrections, completion, manager effort and feedback quality checks.

Differentiation for client

Supports better manager preparation while explicitly protecting human ownership of performance decisions.

07 AI Talent Review & Succession Preparation Agent

Client industry / country

UAE Local Technology Group - fast-growing multi-entity organisation.

Client pain point / scope

Talent reviews require manual consolidation of performance, career, succession and mobility information, consuming HR time before leadership discussions.

Our methodology

Define approved talent measures, critical-role criteria and evidence sources. Design an agent to assemble validated talent-review briefs, highlight missing information and prepare questions for calibration. Automate action tracking after reviews. Do not infer potential or select successors; leadership and HR retain those decisions. Monitor data completeness and action closure.

Technology leveraged / design environment

Existing talent/HCM platform; Power BI; Microsoft Copilot / approved LLM; Power Automate; Excel / Power Query.

Results / performance measures

Review-pack workflow, evidence template, governance rules and action dashboard. Track preparation time, missing data, corrections, succession-action closure and review completion.

Differentiation for client

AI organises evidence and actions without turning subjective talent decisions into automated scoring.

08 AI Workforce Insights & Executive Briefing Agent

Client industry / country

KSA Government-Linked Organisation - large national workforce.

Client pain point / scope

Executives receive multiple workforce dashboards but still depend on analysts to translate validated metrics into concise trends, questions and action points.

Our methodology

Create a certified KPI layer and permitted aggregate measures. Design an agent that reads validated dashboard outputs, identifies material changes against thresholds and drafts executive commentary with underlying values visible. Analysts review narratives before release. Automate scheduled briefing assembly and exception alerts.

Technology leveraged / design environment

Power BI / DAX; Power Query; approved enterprise LLM / Microsoft Copilot; Power Automate; existing HRIS/HCM data as source.

Results / performance measures

Executive briefing workflow, threshold logic, review controls and quality log. Track analyst preparation time, factual corrections, briefing timeliness and action closure.

Differentiation for client

AI converts certified metrics into reviewed decision support rather than generating unsupported workforce narratives.

09 AI Employee Listening & Experience Theme Agent

Client industry / country

UAE Government Entity - large multi-location workforce.

Client pain point / scope

Survey comments and service feedback contain useful signals but manual theme analysis is slow and inconsistent across reporting cycles.

Our methodology

De-identify approved text and establish privacy thresholds. Define a controlled theme taxonomy, then use AI to classify comments and propose emerging themes for analyst validation. Compare aggregate themes over time and link them to action plans without inferring individual sentiment or causality. Automate action reminders and trend reporting.

Technology leveraged / design environment

Survey platform; approved enterprise LLM; Power BI; Power Automate; Excel / Power Query.

Results / performance measures

Theme-analysis workflow, validation sample, privacy controls and experience dashboard. Track classification agreement, theme coverage, action closure and trend movement.

Differentiation for client

Scales qualitative analysis while protecting anonymity and requiring human validation of themes and interpretations.

10 AI Reward & Policy Query Copilot for HR Teams

Client industry / country

UAE Financial Services Organisation - controlled HR/reward environment.

Client pain point / scope

HR teams spend time interpreting approved reward policies, eligibility rules and recurring employee questions while handling highly sensitive data.

Our methodology

Restrict the copilot to approved policy and non-transactional guidance. Build retrieval from current documents with source citation and role-based access. Define prohibited tasks including individual pay decisions or sensitive inference. Route complex cases to Reward/HR. Analyse question themes to identify unclear policy and communication gaps.

Technology leveraged / design environment

Approved enterprise LLM / Microsoft Copilot; SharePoint; Power Automate; Power BI; existing reward/HR systems remain authoritative.

Results / performance measures

Copilot design, access/control matrix, test pack and usage dashboard. Track answer accuracy, escalation, corrections, policy gaps and HR handling time.

Differentiation for client

Provides controlled policy assistance without automating compensation decisions or exposing sensitive employee information.

11 AI HR Transformation PMO & Benefits Tracking Agent

Client industry / country

KSA Multinational - multi-workstream HR transformation programme.

Client pain point / scope

Transformation teams spend significant effort consolidating updates, actions, risks and benefits across HR process, analytics, automation and adoption workstreams.

Our methodology

Standardise workstream inputs, milestone definitions, risks and benefit measures. Design an agent to summarise validated updates, identify overdue actions and draft executive status commentary. Automate reminders and reporting assembly. Workstream owners verify status and benefit realisation before publication. Maintain source links and correction logs.

Technology leveraged / design environment

Microsoft Teams; SharePoint / Lists; Microsoft Copilot; Power Automate; Power BI; existing project-management tools.

Results / performance measures

PMO agent workflow, benefits register, RAID/action dashboard and reporting cadence. Track reporting effort, overdue actions, milestone variance, correction rate and validated benefits.

Differentiation for client

AI reduces programme administration while accountable owners retain status, risk and benefits sign-off.

12 Responsible HR AI Agent Governance & Control Framework

Client industry / country

UAE Large Conglomerate - enterprise HR across multiple businesses.

Client pain point / scope

HR teams want multiple copilots and agents but lack one operating framework for approved data, autonomy, testing, human review, monitoring and retirement.

Our methodology

Inventory proposed agents and classify by data sensitivity, decision impact and autonomy. Define permitted inputs/actions, human checkpoints, evidence requirements, access, retention and escalation. Test hallucination, bias, privacy leakage and failure modes. Require versioning, correction/override logs and periodic review. Monitor quality and incidents across the agent portfolio.

Technology leveraged / design environment

Approved enterprise LLM environment; Microsoft Copilot ecosystem; SharePoint; Power Automate approvals; Power BI quality monitoring; enterprise governance/security controls.

Results / performance measures

Agent register, risk tiers, control library, test protocol and monitoring dashboard. Track unsupported claims, corrections, overrides, incidents, approval compliance and review status.

Differentiation for client

Creates an operating system for responsible HR agents so experimentation can scale without surrendering human accountability.
